INVESTIGATION INTO THE OPERATION OF THE

The stabilizer is for use with the 3-wheeled USG-12A
tractor. This tractor has 2 driven wheels steered
simultaneously, positioned in 1 track, and a third,
supporting wheel, arranged symmetrically with the
driven wheels. The stabilizer uses the redistribution
of the load upon the wheels, when the tractor operates
on a slope, to cause an automatic adaptation of the
framework to the ground contours. Tests showed that
the stabilizer permits the tractor to operate normally
